

Press Release

POLAR at Fespa for the first time

POLAR will show digital printing solutions at the HP stand

For the fourth time, the FESPA Digital fair will open its gates from 24 – 27 May to present new technologies, products, applications and techniques. This time, you will find POLAR in Hall 4A, Stand C40-41 at the Hewlett Packard stand. We will be showing a POLAR 66 X cutting machine.

Equipped with a 10.4" color display this POLAR 66 cutter is specially designed for the needs of digital printing businesses. The hydraulic machine is mainly used for simple cutting jobs and to handle the 35 x 50 offset class. The P-Net networking concept allows to integrate it into the digital workflow which also ensures a perfect connection to digital printing.

The POLAR cutter is equipped with the new Barcode Scanner option. It allows specific job data to be read with the scanner and can automatically call up the appropriate cutting program. This not only saves time, but also helps to avoid mistakes.
