

Press Release

POLAR at Océ Production Printing Summit

At this years Océ event POLAR will show digital printing solutions

Having last appeared in 2007, Polar will be back at the Océ presentation from 7 – 10 June. The title of the event is: „Digital Printing – Discover the latest applications in industrial print, publishing and promotional communication“. At the event in Poing POLAR will be showing a POLAR 66 X cutting machine.

Equipped with a 10.4" color display this POLAR 66 cutter is specially designed for the needs of digital printing businesses. The hydraulic machine is mainly used for simple cutting jobs and to handle the 35 × 50 offset class. The P-Net networking concept allows to integrate it into the digital workflow which also ensures a perfect connection to digital printing.

The POLAR cutter is equipped with the new Barcode Scanner option. It allows specific job data to be read with the scanner and can automatically call up the appropriate cutting program. This not only saves time, but also helps to avoid mistakes.
