In stock: Delivery availability for POLAR three-side trimmer

High format variability, visible working area and user-friendly menu navigation: The BC 330 from POLAR is currently available for immediate delivery.

The robust and networkable POLAR three-side trimmer is the machine for automatic trimming of perfect bound or saddle stitched products. The BC 330 requires only one knife to trim all three pages of a book or magazine. The product is brought into the respective cutting position by a gripper. A major advantage of the POLAR machine is the good visibility of the workplace thanks to a generous window front. The cut is made hydraulically, allowing the dwell time of the knife at bottom dead center to be adjusted to the material. The robust cutting unit guarantees a precise cut that is gentle on the material. The pressing pressure can be infinitely adjusted to any cutting material within a wide adjustment range. Several products stacked on top of each other can be cut simultaneously to increase performance.

"We are glad that we can continue to supply and satisfy our customers in times of supply shortages and pandemic-related restrictions. The availability of the three-side cutter as a proven classic is a positive prelude to an improved market situation in this regard thanks to appropriate stocking," says Hendrik Kneusels, Sales Manager of Polar Mohr.
